Bugs on Booctep.com + new issues:

[English → template]
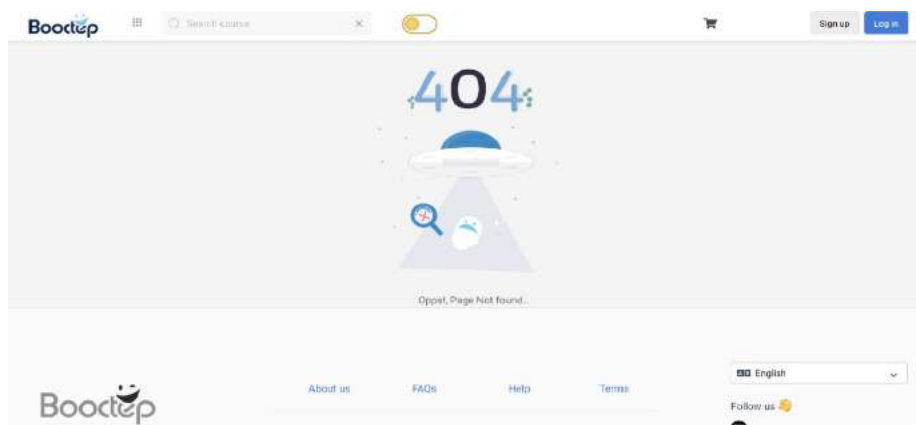

1. any bad request show 404 page.
If user write any wrong request on the url redirect them to → 404 page.
(User MOST not be able to see Django files).

Current bug looks like:

There are many bad request → example multiple slash, page not exist,

While it's MOST be going to 404 page below:

[[MOST important thing is No one can see django template redirect any bad request to 404 page]]

2. Fix add to fav / cart.

If user click multiple times fast the number of drop down will increase without a real adding.
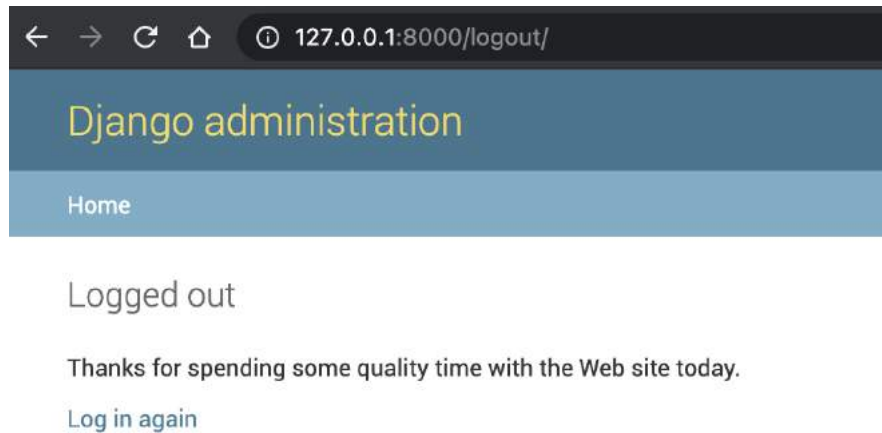

Current bug looks like:

If user (click and un-click) multiple times the number might be 9 while the real courses in the cart /fav pages are 6.

3. Logging out from dashboards (teacher / student).

If user try to logout from dashboard template (teacher / student) the logout redirect to wrong location.

Current bug looks like:

While the logout MOST redirect to → homepage.

4. Logging in Modal not works on some pages.

If user click on login modal on some pages it show nothing.

Current bug looks like:

It 's just loading.

While it Most show the MODAL.
The pages:
1. category (if it's empty only) → http://127.0.0.1:8000/en/category/7/
2. Terms → http://127.0.0.1:8000/en/terms/
**3. View profile → http://127.0.0.1:8000/viewProfile/40/**

5. Login Most br on the same page.

For example If user logged in become a teacher page the login MOST redirect to become a teacher.
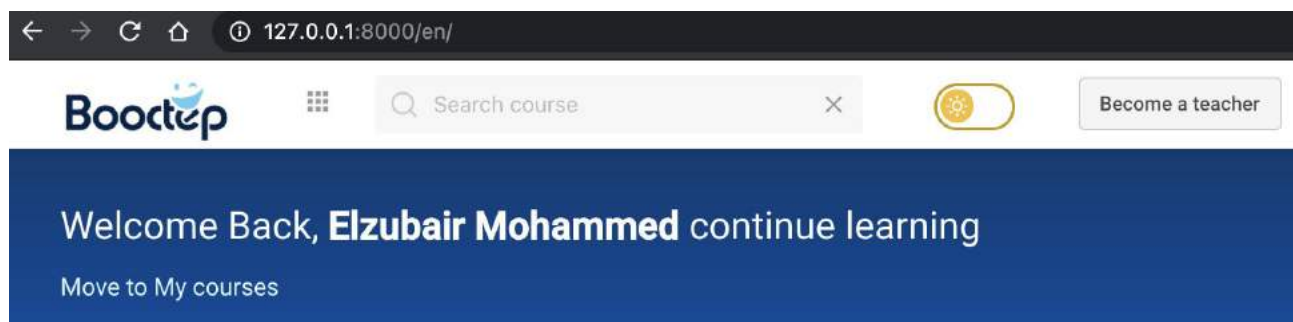

((as well as all the other pages))

Current bug looks like:
**Step 1**

Step 2

While it Most redirect to the same page with logging in.

6. Fix Select user drop down and account drop down.

When user click on drop – downs icons the account drop down selected.

As well as when user click on account it's select the whole list (it's need to be fixed).

7. bad logic.
Some pages MOST not show when user is logged in & some pages MOST not shown when user is logged out.

(when user try to copy and paste the url).

Pages Most not show when user is logged out.

→ **http://127.0.0.1:8000/en/teacher/messages/**
→ http://127.0.0.1:8000/en/teacher/notifications/

[when user is a teacher this pages MOST redirect to Homepage].
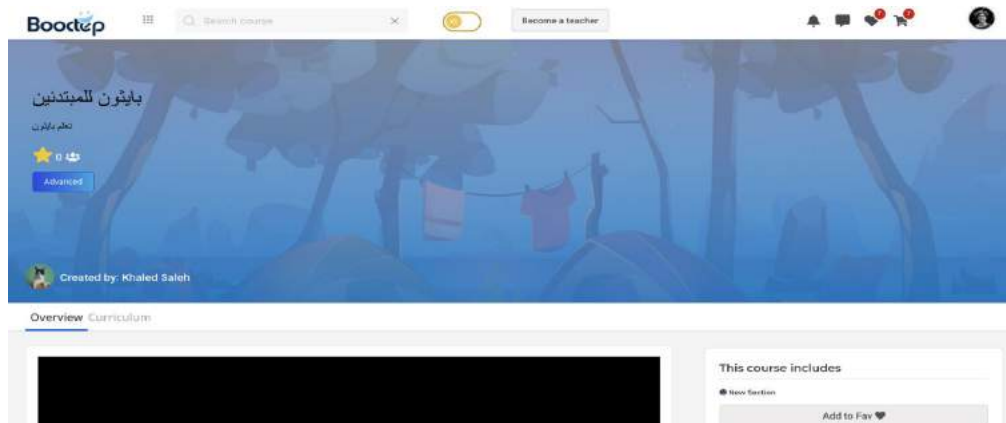

9. bad logic - 3.
Some pages MOST not show when user is not registered on the course.

When user is not (enrolled / bought) the course and try to copy and past the url of the content of the course it MOST redirect to the course details.

Example:
→ http://www.booctep.com/video/playground/1/ → this where student can watch their courses,
BUT when student **NOT** subscribed on the course it MOST redirect to
→ http://127.0.0.1:8000/en/course/Food_Vlogging_Training/
HERE:

10. bad logic - 4.
Some pages MOST not show when user is not the same user who take the certificate.

Means if user with id = 19 AND user with id = 2
**User with id = 19 can't see User with id = 2's Certificate.**
User with id = 2 can't see User with id 2's certificate.

→ **[encrypted the link for only the user himself, no one can see it accept the user].**
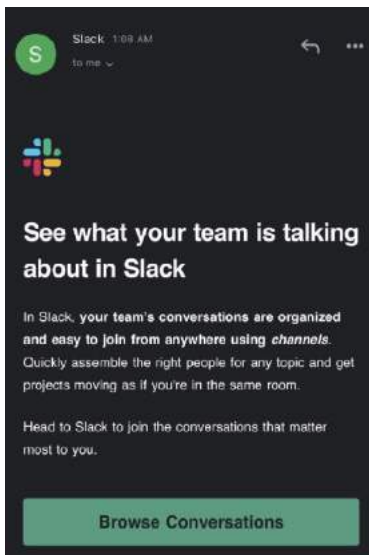

You MOST design the automatically email.

Current design looks like:

It's MOST be like this design:

(the activate link redirect has problem check [Booctep File]).

The Emails that need to design it:
→ Activate user account (activate link).
→ Welcoming (after activating the account direct).
→ Buy a course (course details).
→ Enrolled a course [free course] (course details).
→ Reset password (reset link).
→ Your password has been changed (after password changed).
→ Opening section (for dripping style).
→ changed email (after we change user email from admin.booctep.com).
→ Finish the course (Most have a link that send to quiz).
→ Print Certificate (after finish the quiz there MOST be link sending to PDF page that got the certificate).

13. Change URLs.

Some urls not to be changed.

Here just for [english template].

1

→ **http://127.0.0.1:8000/en/category/5/**

This for the main categories on the website + category id.

The new URL → category / category name.

Example:

→ **http://127.0.0.1:8000/en/category/**Business/

2

→ **http://127.0.0.1:8000/viewProfile/40/**

This for viewing teacher profile.

The new URL → profile / teacher first name _ teacher last name.

Example:

→ http://127.0.0.1:8000/en/profile/Elzubair_Mohammed

3

→ **http://127.0.0.1:8000/en/course/Food_Vlogging_Training/ecommerce_payment/6/**

This for checkout when users wants to pay course fees.

The new URL → course / course name/ checkout / course id.

Example:

→ http://127.0.0.1:8000/en/course/Food_Vlogging_Training/checkout/122333

14. redirect to home page.

If someone trying to copy and paste payment url that is for another user IT MOST redirect them to

[[It MOST be on the both templates]].

15. Never go back.

On Payments AND Add new course user can't go back once he try from the browser to go back it MOST redirect to the same step(page).

When payment generate a transaction No.
When course generate a course_url.

Users can't go back manually.

16. Make sure it's all work in Live.

Now some features works in localhost **BUT** not works in the Live server.

17. Fix the drop-down.

There are some page has no full header the code is missing (on the header only).

this is how the header most be.

==And this is some pages header.==

The pages that need to fix this:
- Faqs → http://127.0.0.1:8000/en/faqs/
- Help → http://127.0.0.1:8000/en/help/
- become a teacher steps → http://127.0.0.1:8000/en/become_a_teacher/

18. Fix redirect to bad location.

On teacher profile page if user click on the logo and want to go to hoempage the redirect will go to wrong location.

==Here:==
 → http://127.0.0.1:8000/viewProfile/40/

the redirect will goes to → http://127.0.0.1:8000/en/40/
While it MOST goes to → http://127.0.0.1:8000/en/

19. Fix the speed of adding course.

On the server adding course is very slow (On the Live server) it need to be fixed.

20. Fix change Mood on the Live server.

It's very very slow when it's change & when user click on any page.

21. Run switch dashboard between teacher AND student.

If the teacher is student and teacher you MOST run the switch AS well in Arabic.

Student Dashboard ⇆

22. Fix pictures storage.

On the live server pictures not saved on the DB.

23. We might need to save the videos on cloud storage not DB.
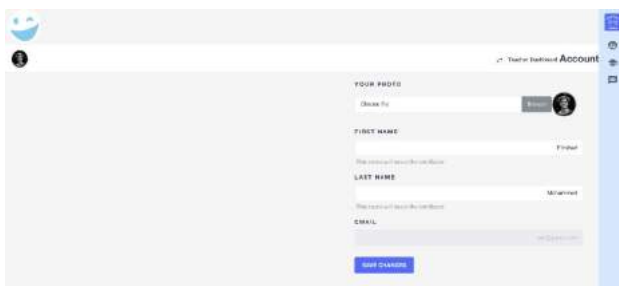

**In case if we want this move it will be required to be developed.**

[Arabic → template]

1. Fix the Arabic template.
- Some pages are not on the Arabic template when user change the language.
((All pages MOST be on both templates))

- All codes that run on english template MOST be on the Arabic template

- Change the direction to RTL so the whole Arabic template MOST be **opposite** to the English template.

Only few pages are works, It MOST all be work.

Example 1

Example 2

Example 3

((AND there are more pages, the whole both templates MOST be fixed
It need to be done all the left MOST be right on the Arabic template with same Margins and Padding.))

on the Main template:
All pages MOST be like → http://127.0.0.1:8000/ar/

on dashboards templates:
All pages MOST be like → http://127.0.0.1:8000/ar/account/ (with a little changes).

2. copy the Arabic url.
The Arabic url can't be copied.
When user tried to copy that it's come like that.
→ http://127.0.0.1:8000/en/course/%D8%A8%D8%A7%D9%8A%D8%AB%D9%88%D9%86_%D9%84%D9%84%D9%85%D8%A8%D8%AA%D8%AF%D8%A6%D9%8A%D9%86/

While it MOST be → http://127.0.0.1:8000/en/course/باثون_للمبتدئين/

3. when language is Arabic the URLs page not works.
If user in **Arabic** Homepage for example and try to reach some pages the new Url will be **English** AND the new url page.
Example:
if user in this page → http://127.0.0.1:8000/**ar**/course/Fly_a_paper_plane/
and click on settings they will go to here → http://127.0.0.1:8000/**en**/account/
While they MOST go here → http://127.0.0.1:8000/**ar**/account/

(Fix this error in both templates)

4. Problem when user refresh the page.
If user in **Arabic** Homepage for example and try to reach some pages the new Url will be **English** AND the new url page.
Example:
if user in this page → http://127.0.0.1:8000/**ar**/course/Fly_a_paper_plane/
and click on settings they will go to here → http://127.0.0.1:8000/**en**/account/
While they MOST go here → http://127.0.0.1:8000/**ar**/account/

(Fix this error in both templates)

5. when language is arabic can't go to arabic Homepage direct.
If user click on the logo on english template they will go to english homepage BUT in arabic template they will go to same page in english template.

Example:
if user in this page → http://127.0.0.1:8000/**ar**/course/Fly_a_paper_plane/
and click on the logo they will go to here →
http://127.0.0.1:8000/**en**/course/Fly_a_paper_plane/
While they MOST go here → http://127.0.0.1:8000/en/

(Fix this all pages it's not working in all pages)

6. searching goes to english template.

If user search about anything on arabic template the search goes to the english template.

Example:

if user in this page → http://127.0.0.1:8000/ar/

and search about anything they will go to here →

http://127.0.0.1:8000/en/search/?searchkeyword=as

While they MOST go here → http://127.0.0.1:8000/ar/search/?searchkeyword=as
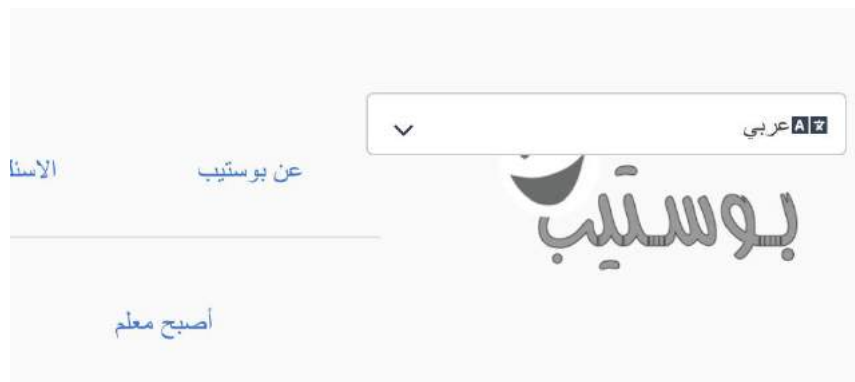

7. Fix change language on footer in become a teacher.

The position of this button floating to right, it's need to floating left.

Here → http://127.0.0.1:8000/ar/become/

8. Fix all bad redirect.

Most pages not redirect to Arabic template it's redirect on Arabic even if user click on Arabic button.

((Fix it all)).

[Data base BUGS]

I got an error when I tried to install it on my mac laptop.

FileNotFoundError at /en/single_course/HTML_5/

[Errno 2] No such file or directory: 'ffprobe'

Request Method: GET
Request URL: http://127.0.0.1:8000/en/single_course/HTML_5/
Django Version: 3.1.5

2. Forging keys in all project.
The project has a problem when I try to delete some tables because it's linked with other table's fields.

Fix it all.

It MOST be like this:

→ When course has been delete = all course related MOST be deleted as well.
- it students, comments, videos, quiz, certificate if there any.

→ When teacher has been delete = all their courses MOST be deleted it as well.

→ When student has been delete = all their registered courses MOST be deleted it as well.

→ When employee has been delete = all their works MOST be deleted it as well.

3. And pagination in (any page that needs to).
1. on Admin website there are pages need a pagination add it to any page that need it AFTER 20 results.
2. on teachers dashboard there are pages need a pagination add it to any page that need it AFTER 20 results.
3. on students dashboard there are pages need a pagination add it to any page that need it AFTER 20 results.
4. on booctep.com website there are pages need a pagination add it to any page that need it AFTER 20 results.

4. Point our domains to same server.

We have 4 domains in total.

We want them all to be pointed to 1 server.

Our server with digital ocean.
Our domains with Goddady.

Domain 1 → booctep.com **already pointed**.
Domain 2 → admin.booctep.com **not yet**.
Domain 3 → booctep.net **not yet**.
Domain 4 → booctep.org **not yet**.

5. Run our support email.

We need to get an email from Goddady or Digital ocean.
→ Support@booctep.com

We want it to be work and ready to send & receiving email.

6. Create mysql DB in digital ocean.

7. Create back up in digital ocean.

5. Run our support email.

We need to get an email from Goddady or Digital ocean.
→ Support@booctep.com

We want it to be work and ready to send & receiving email.
